

HOW TO CREATE AN ON/OFF SWITCH FOR SLOW or STUCK ECN'S

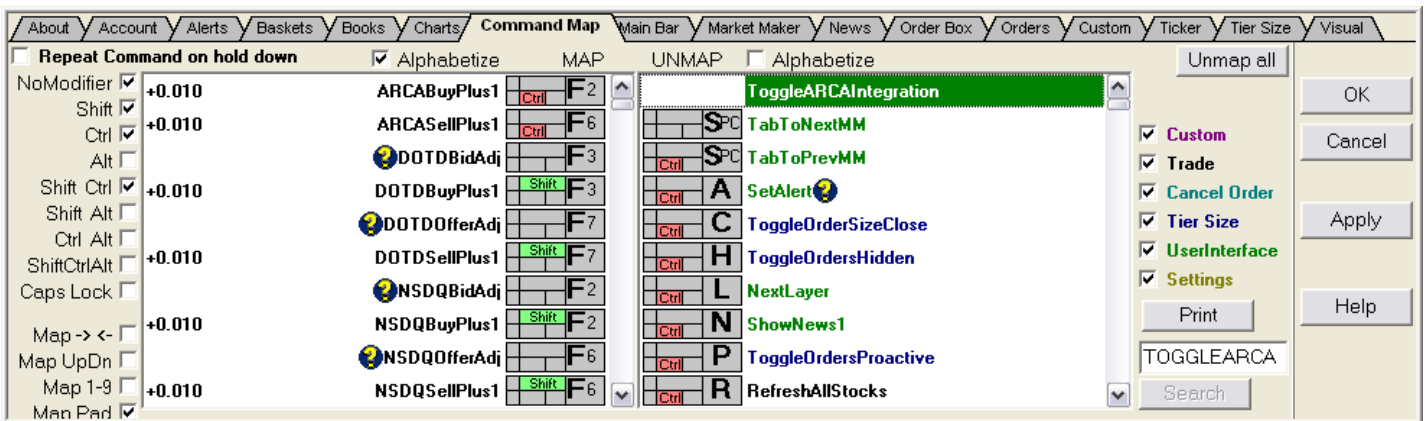

The following will give you the power and ease, to quickly create an on/off command key in the ANVIL. It will instantly force any ECN you choose to "FLUSH" from the Market Maker, Level 2 box !!!

Follow these very simple steps to have more control AND less frustration when a *slow or stuck* ECNs' are in the way on any stock, exchange, bid or offer.

1. First, open your Anvil Settings by "right clicking" with your mouse on the Main Bar and then click the Command Map tab, as shown in this example below:

2. Next, in the Search Box near the bottom right of the Command Map tab, type in the word TOGGLE following the ECN name (without spaces) that you wish to create an on/off toggle switch for. Look at the example here:

3. Lastly, choose a "TOGGLE" set of keys that you do not currently have in use... (such as the "CTRL" key with letter "A" for a simple example). Press the desired keys once (on your left side, you will see if the key is already mapped or if it is empty; then just press the set of keys a second time to confirm, while finally clicking the "APPLY" and "OK" buttons.....
YOU HAVE NOW SUCCESSFULLY SETUP AN ON/OFF TOGGLE KEY!

A FEW TIPS TO KEEP IN MIND...

- Press your new set of keys on and off and watch your ECN's disappear!
- Repeat the step with a different key for any other know problem ECNS.
- **DON'T FORGET** to "Toggle" the ECN(s) back on when you want it back.
